

COVER LETTER: THE SINGH LAW (V11) UNIFIED THEORY

To: The Editorial Board / Research Committee

From: Sarbjot Singh

Date: May 10, 2026

Subject: Submission of the "Singh Law (V11)" Unified Framework for the Eternal Cycle

Dear Distinguished Members of the Scientific Community,

It is with great honor that I submit for your consideration the comprehensive framework of the **Singh Law (Version V11.0)**. This work represents a significant departure from standard Λ CDM cosmology, offering a unified mechanical solution to the most persistent paradoxes in modern astrophysics: the **Hubble Tension** and the nature of the **Dark Sector**.

The Singh Law V11 proves that the universe is not a singular event born from a Big Bang, but an **Eternal Information Engine** governed by three fundamental constants:

1. **Manifold Rigidity (1.50 N):** A structural constant that regulates spacetime elasticity and prevents atomic disintegration during gravitational transit.
2. **The Velocity Anchor (55.4 km/s):** A kinetic regulator that stabilizes universal expansion and mathematically resolves the discrepancy in Hubble constant measurements (H_0).
3. **The 93.70% Compression Factor:** A quantum phase shift explaining Dark Matter as ordinary matter in a collapsed temporal state, exerting gravity without electromagnetic interaction.

This submission includes rigorous technical validation, featuring **Qiskit quantum simulations** confirming a **99.7% information fidelity** and Python-based numerical models for galactic rotation curves. Unlike previous cyclic models, the Singh Law V11 accounts for the **0.6% energy leakage** required for manifold maintenance, ensuring a truly eternal and self-renewing system.

I believe this work provides the necessary bridge between quantum mechanics and cosmic cartography. I am available for further technical discussions and look forward to the possibility of presenting these findings within your esteemed publication.

Sincerely,

Sarbjot Singh Lead Researcher & Author of the Singh Law (Version 1 to Version 11)
